Let us host your network equipment

Colocation Services

Along our long-distance routes, we offer our customers secure locations to house their own active components, such as their repeater systems. For all companies that require ducts, duct capacity, their own fibre or Dark Fiber along our routes, these colocation sites allow them to operate their own network.

Our larger colocation sites are equipped with access protection, video surveillance, secured power supply and redundant temperature regulation. The redundant fibre optic connection guarantees a fast, secure and free connection to our network, distributed throughout Switzerland along our routes.

Our solutions

1. Leasing rack space, racks or space to securely host your own systems on our premises (colosite).

2. Rack space, rack or space to amplify your signals along our Dark Fiber lines (repeater site).

3. Technical support for the planning, implementation and maintenance through our specialists.

GAS&COM
The Speed of Light

Secure. Redundant. Failure-free.

- 4 large colocation sites in the cantons of Zurich, Solothurn, Berne and Vaud

- Dozens of small sites throughout Switzerland along the natural gas pipelines
