build your own
network**

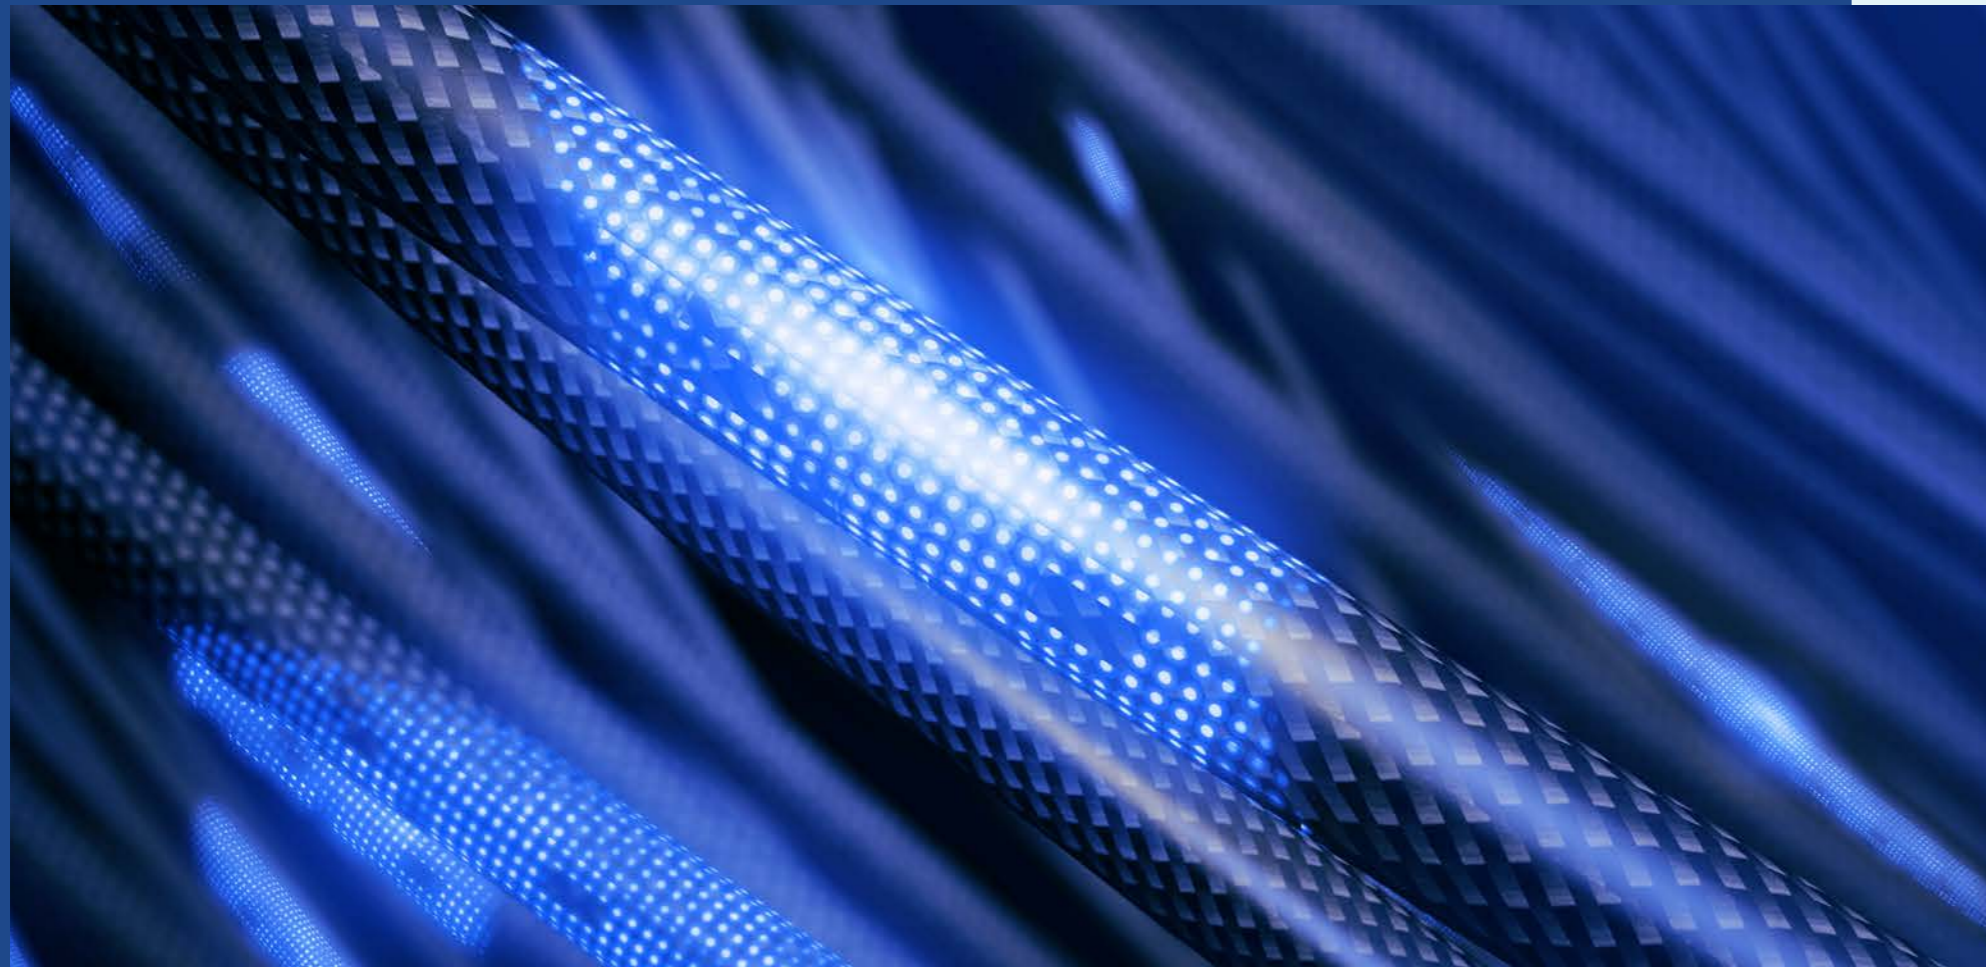

Duct Leasing

Our duct leasing offer is unique in Switzerland and offers high added value in many respects.

Besides the leasing of complete ducts, we also offer duct capacity sharing. This allows to place an own cable with a contractually defined diameter.

In addition, we also offer the possibility of leasing speedpipes. Speedpipes are small tubes in a tube composite, which can be pulled into the cable protection tube.

Flexible. Customised. Economical.

- Various potential exit points plannable throughout our duct networks
- Needs-based financing models: leasing, IRU, swap, purchase
- The perfect addition: colocation sites options throughout our duct networks
- Very direct, short routes. Ideal as low latency backbone transit or connections between data centres
- You benefit from the most stringent security standards along the natural gas pipelines
- More economical and faster than a new-build solution

For leasing, we support you in the procurement of optical fibres, the installation as well as the connection and measurement.

In addition, we can offer you appropriate maintenance contracts for your fibre optic cable. This is a further advantage, as we can cover your needs and challenges from a single source.
